A few words about Kos

Nestled right opposite the coast of Turkey, in the heart of the Aegean archipelago, Kos is a Greek Island that belongs to the Dodecanese Island complex. Kos effortlessly blends the old with the new, boasting dozens of easy-to-reach beaches, several historical landmarks, lush vegetation and heavenly teal-blue waters attracting +1.000.000 visitors annually. The island is located 338 km (210 miles) from Athens, it has a coastline of 112 km and a population of approximately 35.000 people. Its recently renovated international airport, Hippocrates, offers daily flights to Athens and links Kos to several European countries.

Kos stands out as the Dodecanese's premier beach destination; a true Med oasis both for history enthusiasts & adventure seekers. Its vast vegetation, mild climate, blue waters & never-ending coastlines form a scenery of extraordinary beauty, ideal for summer holidays.

The island has a rich history dating back to prehistoric times (3.000 BC). It is also often described as an open-air museum, and rightly so, featuring dozens of archaeological sites & offering plentiful cultural events throughout the year. Hippocrates (460-377 BC), the father of medicine & author of the Hippocratic Oath, practised and taught his medicine in the ancient Askleion, one of the most emblematic landmarks, preserved in the countryside of Kos. Many & diverse historical monuments are a testament to the crossroads of civilisations that once bloomed on the island. Churches, Ottoman mosques, roman architecture, exotic palm trees, & Mediaeval castles, form a fusion of outstanding cultural landscapes & natural beauty.

Cycling, horseback riding, wine tasting tours, mountain biking, island hopping, water sports, windsurfing, kitesurfing, scuba diving, taking pictures of exotic pink flamingos in the island's wetlands (Tigaki or Psalidi), feeding peacocks (Plaka forest) or hiking on top of mount Dikaioi, are some of the options to keep you occupied & help you get in touch with nature.

Cosmopolitan, vivid & diverse, Kos is undoubtedly one of the most outstanding Greek destinations, offering a fascinating, complete and wide-ranging travel experience.

About CEST

Started in 1989, the International Conference on Environmental Science Technology (CEST) is a leading environmental conference where top experts, scientists, entrepreneurs, representatives of public administration and social initiatives present state-of-the-art research on current and emerging environmental issues. Thus, CEST has been established as a forum for the convergence of business and academia, where cutting-edge concepts, research, and solutions form the cornerstone of a more sustainable, healthy, and clean environment.

CEST2025

CEST2025 is announced at a pivotal time when the intensifying climate crisis linked with the depletion and contamination of water resources and exacerbated by the increasing frequency of extreme weather events is challenging the resilience of societies worldwide and reshaping the planet's natural systems. Biodiversity, already under severe strain from **habitat loss and environmental degradation**, faces even greater threats as shifting temperatures disrupt ecosystems and the species that rely on them. Circular economy contributes to mitigate impacts by **reducing waste, promoting sustainable resource use, and driving innovations** that foster environmental and economic resilience.

This long-standing conference series has fostered collaboration and innovation in various Greek islands, while the last two events were held in Athens.

The previous event (CEST2023) gathered **+350 participants** from all over the world.

During CEST2023, **47 sessions** were organized and **+480 papers** were presented along with **19 keynote speeches**.

We are now excited to re-establish our connection with Greece's coastal heritage, embracing Kos Island's inspiring environment to advance discussions on **critical environmental issues**.

Join us to connect, collaborate, and contribute to impactful environmental solutions!
